NIKKEN KOSAKUSHOWORKS, LTD.
CAT.NO.8318

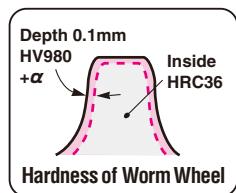

ANTI-WEARING, HIGH RIGIDITY and HIGH SPEED ROTATION

Worldwide Field-proven NIKKEN CNC Rotary Table

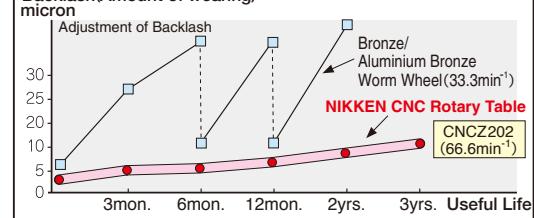

Worm Wheel

Specially hardened and furthermore ion-nitrided on the tooth. Thus, the problem of the sliding friction is solved. The hardness of the tooth surface and inside is shown at right hand side.

Backlash(Amount of wearing) micron

Worm Wheel of Others
(Bronze/Aluminium Bronze)

It is not exaggeration that the most important parts of the CNC rotary table is worm system. Please choose NIKKEN CNC rotary table with special worm system for our anti-wearing, high rigidity and high speed rotation.

CNC ROTARY TABLE for **SPEEDIO**

NIKKEN

The servo motor and the amplifier of the rotary table for **SPEEDIO** are special one only for **SPEEDIO**.

The existing servo motors or the amplifiers for BROTHER TAPPING CENTER can not be used.

Please specify the machine name and the layout of the rotary table, when ordering. Standard layout of the rotary table is to install the left-handed rotary table on the left side of the machine.

Please specify the options

	R450X1		R650X1	
	Standard	Option	Standard	Option
Swing Dia.(mm)	1,020	1,100	1,250	1,300
JIG Height(mm)	300	350	350	420
Load (kg)	120	200	200	300

★Option can be selected independently.

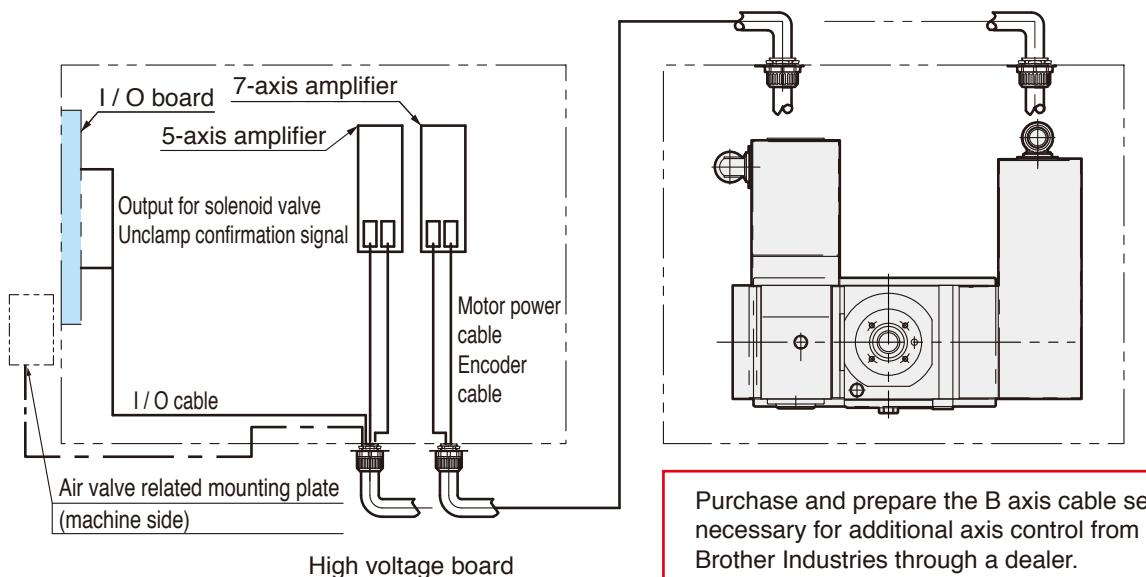

CNC ROTARY TABLE wiring diagram for SPEEDIO NIKKEN

The amplifier, all cables and the rotary table with the suitable servo motor will be supplied from NIKKEN.
Installation fee will be charged separately.

SPEEDIO Wiring Diagram (Additional 1 Axis)

SPEEDIO Wiring Diagram (Additional 2 Axis)

CAUTION

Please note below when using compact machining center **SPEEDIO** abroad.

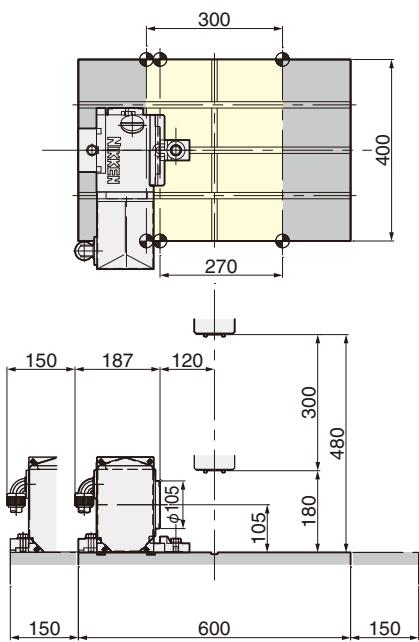

- When exporting together CNC circular table or rotary inclination table of 1 axis additional axis control, export permission may be required from Ministry of Economy, Trade and Industry Please consult with the distributor.
- When installing an additional axis type CNC circular table additionally after exporting the compact machining center **SPEEDIO** overseas, it is necessary to activate the additional axis. In that case, please contact the distributor.

In the case of non-white countries etc., if you are installing a rotating tilting table retrofitting abroad after exporting If you are exporting from Japan beforehand, you should export it in conjunction with the compound rotary table and then export it, or by using the NIKKEN EZ Controller or the AA21 controller as the tilt axis, it is possible to operate the tilt axis using the M signal.

DD250LS-50

Special clamp device is needed.

Caution

Selection of the CNC rotary table

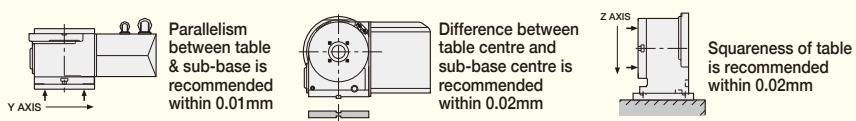

- The support table is basically used in case of vertical application.
- The machining operation is generally light cut on aluminium materials, however, if the fixture or the component is large size, please make sure that the fixture inertia is within the MAX. work inertia.
- If the unbalance load is too big, it will affect on not only the indexing accuracy but also the durability. Please make sure the unbalance load will be within the following figures.

CNC105 : 10Nm, CNC180, 202 : 20Nm, NCT200E, NCT200 : 20Nm, CNC260, 302 : 30Nm

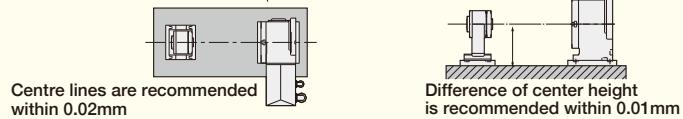

- In case of the unbalance load is large,
- The high speed Z series rotary table is not suitable, please use standard rotary table.
- Please installing the balance cylinder or counter balance.
- Please advise us the details of the component, fig fixture, indexing time etc. prior to your order, and we will make a calculation of the load and select the best suitable rotary table for your application.
- If the huge amount of coolant has to be applied, we could prepare air purge (with pneumatic pressure of 0.03MPa) on the CNC rotary table body as an option. Please contact us the details.

Check point for trunnion fixture

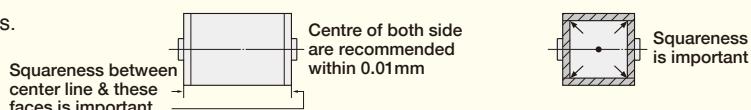

- When installing the table onto the sub-base, measure and check as follows.

- Install the table & support table onto the M/C as follows.

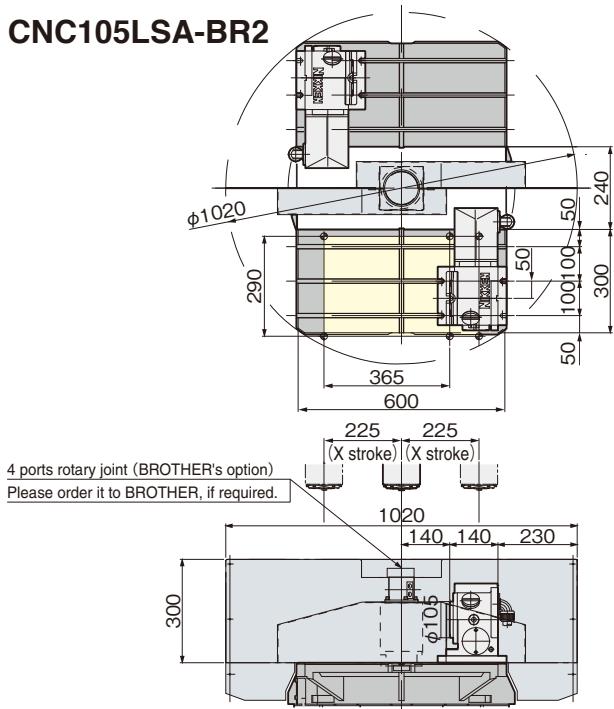

- Trunion fixture is recommended to be aligned as follows.

5AX-130	150	P-150S*3	PBA-150	*1	
5AX-201	180	P-170S*3	PBA-180		

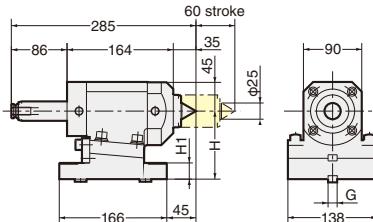

*1 The center height can be adjusted to the CNC rotary table by the base plate.

*2 Center height of CST100-105

*3 5 pcs of the changeable center are attached as standard for P-150S, P-170S.

*3 The left-handed type is also available.

Air/Hyd. both usable Tailstock

Code No.	Center Height H	H1	G	Thrust(N)		Weight (kg)
				Air 0.5MPa	Hyd. 2MPa	
PBA-105	105	25	14	1176	4733	15
PBA-135	135	55	14	1176	4733	20
PBA-150	150	70	18	1176	4733	22
PBA-170	170	90	18	1176	4733	24.5

* Rotary center is built-in.

* MT (Morse Taper) type quill is also available. Please contact us.

* The different length of the stroke is available. Please contact us.

* Center height can be adjusted within 0.35mm.

Support Table

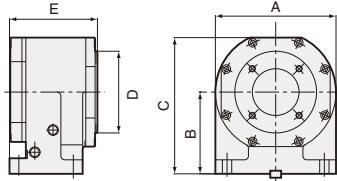

Photo shows
TAT-105N.

Air ports are 2 X Rc1/8. Solenoid valve and clamp/unclamp confirmation switches are not included.

Code No.	A	B	C	D	E	Clamping System	Brake Torque (N·m)	Weight (kg)
TAT-105N	155	105	175	105	113	Air	205	16
TAT-170N	155	135	220	170	138	Air	205	25
TAT-250N	250	170	295	250	145	Air/Hyd.	112/784	50

* Air pressure is 0.5MPa.

* The powerful double intensifying brake system is built in TAT-105 and TAT-170.

* Rotary joint is available for all models.

* Please contact us for TAT-250.

ROTARY JOINT, SPECIAL COLOR

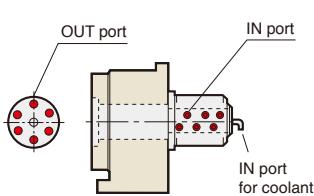

NIKKEN

Rotary Joint

There are 2 types of the rotary joint such as cylinder type and flange plate type. Rotary joint is used for clamp/unclamp of the work piece, confirmation of proper clamp, cleaning, coolant etc. The fine cutting swarf may come into the coolant port through the filter, therefore the coolant port is recommended to be separated.

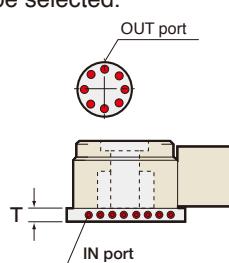

1.Cylinder type Rotary Joint

Retrofitting to standard CNC rotary table is available.

2.Flange Plate type Rotary Joint

IN port position can be changed at any angle of 360°. Any position, which causes no interference against M/C, can be selected.

Code No.	Cylinder type		Flange Plate type	
	MAX. No. of Ports	T mm	MAX. No. of Ports	T mm
CNC105L	4+1*1	25	4	25
CNC180L, 202L	6+1*1	25	4	25
NCT200EL, 200L	6+1*1	30	6	30
CNC260L	8+1*1	30	6	30
5AX-100	(4)		3	
5AX-130	2(4)		—	
5AX-201	—		4	
DD250LS	6	30	6	30

(): MAX. port number of high column table

*: +1 port is the port located in the center hole (for coolant)

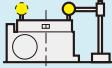

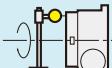

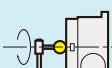

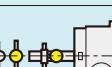

Caution of IN port

- When the air is supplied for all IN ports, please contact us.
- Please do not supply the different pressure of the air in the IN ports next each other.
- Please make sure that the line filter should be provided for pneumatic supply use in order to avoid swarf and water ingress for rust problem.
- This is not avoidable that the oil of the hydraulic port may be leaked to the next air port for the long time use, due to the characteristic of the seal. Please do not assign the air port next to the hydraulic port as much as possible.
- The rotary joint must be specially treated to prevent from the rust, when using the glycol solution for the operating fluid. Please inform us when ordering.
- When the rotary joint is designed at your side, please select the low friction type seal. Then, please check the rotary table movement after installation of your rotary joint, not to over load.

Special Color

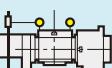

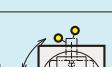

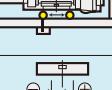

Please order with the color sample of Munsell Color No.

CNC Rotary Table

No.	Measuring Item	Measuring Method	CNC105	CNC ¹⁸⁰ ₂₀₂	NCT ^{200E} ₂₀₀	CNC205	CNC ²⁶⁰ ₃₀₂	DD250LS

CE Mark Declaration of Conformity

5AX-TILTING ROTARY TABLE with NIKKEN Controller Series **NIKKEN**

Please note below when mounting the rotary, tilting circular table to the **SPEEDIO** series manufactured by Brother Industries, Ltd.

- If you attach an additional 1 axis table to machines exported overseas, you may need export permission from the Ministry of Economy, Trade and Industry, so please consult with the distributor.
- When attaching a rotary tilt table, it is possible to use only one axis as an additional axis, but the tilt axis requires operation with M signal. (Two axis additional axis can not be retrofitted.)

By using the **NIKKEN EZ Controller** or the **AA21 controller** as the tilt axis, it is possible to operate the tilt axis using the M signal.

Features of NIKKEN EZ controller and AA21 controller **NIKKEN**

It is possible to drive the tilt axis with one M signal.

The state-of-the-art digital servo motor & absolute encoder are used.

Excellent acceleration / deceleration characteristics, optimized servo parameters for power-up motor torque realize high quality, high performance, super long life.

The **EZ controller** adopts color liquid crystal for the pendant, and operability is improved.

The **EZ controller** can not use direct angle command.

The **AA21 controller** can directly command the moving angle using RS232C, and the machine's operation program can be managed collectively by the machine side.

(There is a connection port of RS232C on the machine side, it will be available only when automatic input / output is possible with macro program.)

■ Product code with 1 axis Controller

5AX-100DEZSA-BR2-A (-B) 5AX-100DAA21SA-BR2-A (-B) -04 -08

NIKKEN WORLD WIDE SALES BRANCH

NIKKEN

There are overseas Sales Branches in 12 countries. Each sales branch has stocks for toolings and CNC Rotary Tables, and service engineers look after the maintenance and service operation of our products. In the other region, e.g. East-South Asia, Ozaena, South America, Africa, etc., there are some distributors. At the production line in abroad, as there are many requirements for special tools and CNC Rotary Table to suit the special specifications, please ask us or distributors for spare tools and maintenance parts in advance.

Caution for Tooling

- Please use a **NIKKEN** collet for the **NIKKEN** chucks.
- Please use a **NIKKEN** chuck for the **NIKKEN** collets.
- may not be performed 100% using on the other makers chucks.
- Please be careful not to inflict personal injury at your handling of cutting tools.
- Please clean the contact surface on a holder & cutting tool shank.
- Please pay attention to prevent from the rust at the storage. We will recommend to use **NIKKEN TOOLINGS** with RPT process for rust prevention.
- Due to the optical system to detect the tool existing on the tool magazine of certain machines, **NIKKEN's** RP treated tooling may not be detected.
- Please check your machine's specifications very carefully to avoid this problem before you purchase our RP treated tooling. The taper connection of the tool shank with RPT treatment is more stuck than the taper connection of the tool shank without RPT treatment. Then, the unclamping force for the tool with RPT treatment is required 20% stronger than the unclamping force for the tool without RPT treatment. Please be

careful to check the unclamping force of your M/C, when the tool with RPT treatment is chosen.

MTA

- Please insert the tool shank into the bore of the holder with adjusting the tang location, and hold them with facing tool front end upwards, and hit the bottom end of the holder(pull stud end) by copper hammer hardy.
- For removal of the tool, insert a bar into tang hole and hit the bar by hammer with special care to prevent the tool from popping out.
- Please clamp side lock screw in case of coolant through application. For high pressure coolant through application, please use milling chuck, slim chuck or side lock holder instead of MT adapter.

MTB

- Please insert the tool shank into the bore of the holder and tighten the draw bolt for the setting.
- For removal of the tool, loosen the bolt at couple rotation and hit the bolt head by a hammer in order to remove the taper fitness, then remove the bolt.

SCA, SCC

- When setting of side cutter or metal saw onto the arbor, please adjust the location of the drive key.

JTA

- When setting drill chuck onto the arbor please put the chuck onto the arbor with adjusting the locations of male & female tapers and hit the bottom end of the holder(pull stud end) by copper hammer.
- Please use **NIKKEN SLIM CHUCK** for high precision and high speed operation.

NPU

- Please insert the drill shank into the bottom, and chuck the shank with the total chucking length of **NPU**.
- Please check the run-out accuracy before machining especially for the small diameter drill.
- When setting the drill onto the chuck, set the drill into the chuck and tighten the chuck ring by hand then tighten the ring by attached spanner to complete.

FMA, FMB, FMC, SMA, SMB, SMS

- Please use the bolt specified by the cutter maker.
- When setting the face milling cutter onto the arbor, insert the spigot of the arbor into the cutter bore and minimize the backlash between the drive key and the slot against the direction of rotation, then tighten the end bolt.
- For the cutter with coolant through the body, please check the coolant pass in the arbor and the cutter before machining.
- For high speed application, please perform the balancing operation with the cutter and insert tips fitted.

PS

- The pull stud is considered to consumption item and should be replaced periodically. The guide line of replacement is :
- Without hole : 3 years or 150,000 times of ATC.
- With coolant hole : 2 years or 100,000 times of ATC.

- The specification are subject to be changed without prior notice.
- The photo. of the machine is permitted to use from BROTHER. The content in this catalogue is published responsible by **NIKKEN**.
- Please contact us for the "Overseas Warranty Contract".
